CVD Cemented Carbide Tools

The Pyongyang CVD Tool Development Corporation is boosting the export of varieties of CVD cemented carbide tools made at its affiliated CVD tool factory.

The factory, which is equipped with high-pressure press, vacuum-type sintering furnace, chemical evaporator and washing machines, is turning out various types of indestructible inserts with cemented carbide powder. It is also furnished with modern machines like TAC milling machines and electric discharge machines for processing toolholders for inserts.

Inserts for external and internal machining, external thread milling, slotting and face milling are in wide use in CNC machining centres, universal centre lathes and other up-to-date machines.

Round and hexagonal drawing dies are diverse in size and ensure high efficiency and long service life.

A wide variety of CVD cemented carbide tools exported by the corporation won worldwide recognition as they have been highly appreciated at the tool exhibitions held in many countries of the world.

In the future, the corporation plans to make inroads into global tool market, while putting its efforts into developing new types of CVD cemented carbide tools.

ECONOMIC EXCHANGE AND

Trade and Investment Delegation of the Associated Chinese Chambers of Commerce and Industry of Malaysia visited Pyongyang at the invitation of the DPRK Chamber of Commerce in May, 2012.

During its visit the delegation looked round several places in Pyongyang and witnessed the struggle of the Korean people who are advancing toward the final victory.

The DPRK Chamber of Commerce interviewed with ACCCIM delegation, in which the DPRK Chamber of Commerce informed it of foundations of the independent national economy of the country and its development, foreign trade, investment and joint ventures and answered the questions on its efforts for foreign trade, economic exchange and cooperation.

COOPERATION

Interviews for investment, economic exchange and cooperation

The ACCCIM delegation had interviews with different corporations of the DPRK. The matter of cooperation in machine, electronics, foodstuff and daily necessities industries and agriculture was discussed and the relevant agreements and contracts concluded.

Explanatory Meeting on Investment

The Korea Foreign Investment and Economic Cooperation Committee hosted an explanatory meeting on investment for ACCCIM.

There were given explanations on the external economic policies, investment-related laws, investment conditions and climate of the DPRK and answers to the questions raised by entrepreneurs present there.

We Will Make Sustained Efforts to

Kim To Hun, President of the Korea South-South Cooperation Corporation

Since its establishment in 1964 the Korea South-South Cooperation Corporation has been faithful to its responsibility and role in promoting South-South cooperation.

Its basic mission is to develop friendly and cooperative relations with developing countries, strengthen economic and technological ties with them on the principle of filling each other's needs and expand the scope of South-South cooperation, under the ideals of independence, peace and friendship.

South-South cooperation is, in essence, an international movement that developing countries are conducting in order to achieve economic independence and secure full-fledged sovereignty after gaining their political independence.

It enables developing countries to achieve economic self-sufficiency so that they can keep their independent stand and exercise full sovereign rights in external relations.

Promote South-South Cooperation

True to the policy of the DPRK government on South-South cooperation, the corporation, even under the country's difficult economic conditions, has rendered free economic and technological assistance to developing countries that aspire after independence.

It assisted in such construction projects as the presidential palace in Madagascar, the meeting hall for the summit of the Organization of African Unity in Guinea, the parliamentary building in Central African Republic, a ceramic factory in Mali and a brick factory in Tanzania. It also gave sincere aids to Rwanda, Zambia, Benin, Ethiopia and Mozambique in education, culture, health care, sports and irrigation and other agricultural domains.

In keeping with the trend of the times the corporation endeavours to maintain close ties with international organizations and make the most effective use of all conditions and possibilities, including human and natural resources, available in developing countries.

Numerous construction projects are in good progress based on the agreement of cooperation, and its activities are geared to expanding the scope of technological cooperation in science, education and health care by dispatching specialists to many countries.

The corporation will continue to adhere to the principles of collective self-reliance, equality and mutual benefit, true to the ideals of South-South cooperation, putting a premium on utilizing all opportunities for economic and technological cooperation with developing countries.

It will also promote trade and economic exchange and cooperation with other countries of the world on the principles of respecting each other and filling each other's needs.

HANA ELECTRONICS J.V. COMPANY

The HANA Electronics J.V. Company specializes in production and sale of DVD players, mice, speakers and other electronic sound facilities.

The company assures fine quality of products through strict measurement of video, sound, generation of signal, temperature and humidity in accordance with international DVD standard.

It runs a music e-library which renders services of collecting, editing

and popularizing the data of Korean and foreign music and dances, which allows open access to both professionals and amateurs.

Its multi-channel music-appreciation room is furnished with sophisticated stereophonic facilities.

The company plans to expand and develop exchanges and collaborations in this field, with a view to enlarging the variety of products including portable DVD players and TV with built-in DVD player.

DPRK's Foreign Trade Gains Momentum Along with the Industrial Revolution in the New Century

Today the Democratic People's Republic of Korea is promoting relations of economic cooperation with different countries of the world under the ideals of independence, peace and friendship.

Its foreign trade develops day by day along with the industrial revolution in the new century that is being made on the basis of its independent national economy.

The DPRK has ushered in a new era of industrial revolution. It is pushing back the frontiers in all domains of science and technology including information technology, bioengineering and nano technology that constitute the core, basic technologies in scientific and technological development of the 21st century.

The flames of the industrial revolution in the new century are contributing to making the country's economy Juche-oriented and modern, and to increasing the proportion of using domestic raw materials and fuel in the economy. As a result, metal products, magnesia clinker, garments, electronic goods, building materials, CNC machines and up-to-date plants of factory have come to take the lion's share in its export items.

Of late, a brisk campaign for breaking through the cutting-edge launched in the sector of machine-building industry facilitates wide application of CNC system to the production lines and establishment of an integrated production management system.

The Ryonha Machinery Corporation put the Huichon Ryonha General Machine Factory on a modern footing to manufacture high-performance CNC machine tools in large quantities, resulting in strengthening their international competitiveness.

The corporation has recently succeeded in manufacturing a parent CNC machine tool of its own design, based on the mass-production of 4-axis, 9-axis, 12-axis and 13-axis CNC lathes and, the State Academy of Sciences achieved a signal success in beginning home production of servo mechanism, a main part of CNC machine tools.

The industrial revolution in the new century made it

possible to make the major industrial sectors Juche-oriented and increase the production of second- and third-processing goods with locally available raw and other materials.

The Korea Ferrous Metal Export and Import Corporation, the Korea Chemical Group and the Korea Zinc Industry Group are mass-producing varieties of ferrous and nonferrous metals and chemical goods by relying on their own production centres furnished with modern machines and equipment.

Backed up by a firm refractory production base with abundant raw material resources and an enormous processing capacity, the Korea Magnesia Clinker Industry Group has made a radical increase in its production capacity of processed goods by introducing sophisticated technology in the course of making magnesia clinker industry Juche-oriented.

In compliance with the requirements of the IT era, trade in cutting-edge and information technologies including software has assumed a considerable proportion in the economy, giving birth to the companies and corporations specializing in technology trade.

The Korea Sihung Information Technology Trading Corporation, the Korea Industrial Technology Corporation and the Korea Kanghwa Trading Corporation, which are staffed with competent personnel, are making strenuous efforts to develop various software needed for putting the national economy on a modern, scientific and information basis and to make a breakthrough in the development of the Juche-based software industry by means of the operation system of the Korean style.

And the corporations are making strenuous efforts to promote technological exchange and cooperation in hi-tech products that have obtained international and national patents in different fields of machine-building, electronics, foodstuff and pharmaceutical industries.

The flames of the industrial revolution in the new century are giving an impetus to the promotion of foreign trade.

Garment Processing Factory

The Hyongjesan Clothing Factory is a promising producer and exporter of fashionable clothes. The factory, inaugurated in 1988, processes scores of kinds of clothes including duck-leather and guinea fowl-leather padded clothes for men, women and children, jumpers in various styles and working uniforms.

Equipped with modern cutting and sewing machines, the factory can perfectly tailor the garments of any styles.

A wide range of clothes including duck-leather padded clothes were highly appraised at the recent national commodity exhibition.

The factory has established a strict production system in an effort to boost garment production on a flow line and upgrade their quality.

It is channelling its major efforts into further updating machines and equipment.

Its products are on sale through the Pyongyang Clothing J.V. Company.

Renowned Silk Producer

The Pakchon Silk Mill, situated in Pakchon County, North Phyongan Province, is widely known as a producer of beautiful silk fabrics including damask silk, polychromatic silk, silk woven without pattern, and figured satin, as well as velvet, napped cloth, fancy cloth, blankets, overclothes and lingerie.

The mill is furnished with up-to-date machines and equipment.

It is boosting the production of silk fabrics by strictly observing the standard regulations for operating machines in every line of weaving, dyeing and processing.

The blanket workshop has introduced the method of regulating the fabric structure and the napping

height, and the cloth centring device for controlling the tension of looms to improve the quality of

The dyeing workshop has applied the new method of matching elaborately the patterns of six to eight colours, raising a nap on the back of blankets and giving an effect of solidity on the surface of dyed blankets by means of control units.

Silk fabrics produced at the mill are finding their way into world market.

The mill is making endeavours to mass-produce quality silk fabrics and expand their variety.

Exchange and collaboration in this field are welcome.

15th Pyongyang Spring

The 15th Pyongyang Spring International Trade Fair ran in Pyongyang, the capital of the DPRK, in May 2012.

It drew many companies from the DPRK, the Netherlands, Germany, Bulgaria, Switzerland, Great Britain, Austria, Italy, Finland, Poland, Australia, Malaysia, Mongolia and Chinese Taipei.

On display at the fair were CNC machine tools and other machinery, electric and electronic goods, medical appliances, metal, chemical and

International Trade Fair

agricultural products, consumer goods, food-stuffs, building materials and vehicles.

The current fair marked an international gathering in economic sector held in reflection of human desire and demand for establishing a new International economic order based on independence and

achieving co-prosperity and development and served as a significant occasion in promoting the wide-ranging contacts, close collaborations and exchanges in the fields of trade, the economy and science and technology.

KOREA

The Korea Zinc Industry Group, inaugurated in 2000, is a leading producer and exporter of nonferrous metals in the DPRK.

The corporation exports electrolytic zinc, crude lead and cadmium and other nonferrous and rare metals.

Its KM-brand electrolytic zinc has been widely recognized as a competitive article in international market for its superior quality.

The corporation has many trade representatives and

ZINC INDUSTRY GROUP

branch offices in Southeast Asian, European and other countries, and faithfully executes its contractual obligations with the counterparts.

The corporation has under its control several mines and smelteries furnished with comprehensive processes of mining, transport and shipment.

The Komdok Mining Complex, provided with the latest equipment in all its production processes including tunneling, mining, transporting and dressing, has perfect structure

of pits of different sizes in accordance with far-reaching pit-building strategy.

Its modernly equipped dressing plants turn out high-grade ore concentrates which are carried to the Tanchon Smeltery by rail.

The Tanchon Smeltery, a giant nonferrous metal producer, is in a position to mass-produce quality zinc through leaching, electrolyzing and casting processes.

The corporation will in future increase its investment in mines

and smelteries endowed with favourable investment conditions and climate and further step up modernization of its production lines so as to fully meet the domestic and foreign demands for nonferrous metals.

Quality Synthetic Leather

The Pihyongsong Synthetic Leather Factory is an established enterprise that produces synthetic leather with excellent waterproof property. It mass-produces synthetic leather of different colours to be used in making shoes, bags, jumpers, belts and car fittings.

The recent modernization of its production lines and the expansion of its production capacity have made it possible to fully satisfy the growing demand for synthetic leather.

The factory is furnished with up-to-date production lines, ranging from feeding of raw materials to shipping.

Efforts are being made to introduce advanced technology into production so as to improve its qualitative indices such as tensile strength, bending strength and sweat absorption.

Of late, the factory, aiming at upgrading the quality of its products, is doing its utmost to set up new lines for producing non-woven fabrics and coating synthetic leather with wet resin.

The factory welcomes exchange and collaboration with foreign counterparts in synthetic leather production.

Rare-Earth Minerals and Prospect of Their Export

The DPRK is rich in natural resources.

Its geologists proved scientifically that the strata of various kinds of valuable minerals have been formed by the action of magma and sedimentation owing to colossal crustal movements broken out consecutively in the long course of geological formation.

A variety of mineral resources which are essential for the development of the national economy are abundantly deposited in the country, including gold, silver, copper, lead, zinc, magnesite, molybdenum and limestone as well as iron and other raw materials prerequisite to the ferrous-metal industry.

In particular, it is abundant in rare-earth minerals, which take a lion's share in the

economic development in the 21st century.

Rare-earth minerals have a wide range of application and are of great significance in the development of new materials, so they are called the "vitamin of industry" and the "depository of new materials."

They are widely distributed in many regions of the country and the prospect of their development is bright.

According to survey conducted by its scientists and technicians, their deposits amount to several million tons in terms of rare-earth oxide.

Various types of rare-earth deposits formed by the specific features of crustal movements can be found in the country. Typical is alkalic feldspatholite.

Monazite deposits that contain zircon, ferrotitanium,

garnet and other valuable minerals are widely distributed in the east and west coastal areas.

Segmentary deposits of thousands of tons of monazite can be also found in the valleys and rivers in the areas where granite and gneiss containing monazite are distributed.

At present, the prospect of development of rare-earth mineral resources and their export is bright in the DPRK.

The DPRK is blessed with favourable conditions for exploiting rare-earth minerals.

The Korea International Chemical J-V Company mass-produces scores of kinds of rare-earth products.

Investors who are interested in the development of rare-earth mineral resources and their products are welcome.

Korea International Chemical J-V Company

Sanyong Joint Venture

The Sanyong Joint Venture Company is specializing in the development of products of cutting-edge technology and technology trade.

The company has a powerful team with sophisticated science and technology.

Precision microreduction gear, reduction gear for power machines and running reduction gear, the differential flexible reduction gears, developed by the company, are products of advanced technology, each of which was granted an international patent.

Precision microreduction gear used in robot and other kinds of precision machines ensures high performance as it is negligible in noise caused by vibration, light in weight and has a special lubricating system.

Reduction gear for power machines is also light in weight, small in size and power consumption and great in gear ratio.

Concrete-coated bush, a product of special treatment technology of coating the surface of ferrous metal and a substitute of copper bush, ensures high economic effectiveness.

Rust-removing and rust-proofing solution, a constant phosphate agent newly developed by the company, is on the increasing demand for its low production cost and wide application.

Plastic and aluminium cashes are also the company's principal export items.

The company is channeling its major efforts into enlarging its export categories, with facilitating the development of technology trade.

Foreign Trade of China

Company

A large, stylized graphic of a book or document. The book is shown from a three-quarter perspective, with its dark cover and lighter, textured spine visible. The pages are slightly fanned out, and the overall image has a dark, moody aesthetic with a purple and blue color palette. The word "Company" is prominently displayed in a white, serif font at the top left, enclosed in a dark, rounded rectangular box.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions, both incoming and outgoing, to ensure transparency and accountability. It emphasizes the need for regular audits and the use of reliable accounting software to track financial data effectively.

2. The second section focuses on budgeting and financial planning. It outlines how to set realistic goals, allocate resources wisely, and monitor expenses against the budget. This helps in identifying areas where costs can be reduced or revenues increased, leading to better overall financial health.

3. The third part addresses risk management strategies. It highlights the importance of understanding potential risks to the organization's finances and implementing measures to mitigate them. This includes diversifying income sources, securing appropriate insurance policies, and having contingency plans in place for unexpected events.

4. The fourth section covers tax optimization techniques. It provides insights into various legal methods to reduce taxable income and maximize deductions. Consulting with a professional tax advisor is recommended to ensure compliance while taking full advantage of available tax benefits.

5. Finally, the document concludes by stressing the value of continuous learning and adaptation in the ever-changing financial landscape. Staying informed about new regulations, market trends, and technological advancements is crucial for making sound financial decisions and achieving long-term success.

Reliable

The Aguk Stone Dressing Plant is a modern stone dressing centre which turns out various kinds of quality building materials with natural stones abundantly deposited in its surrounding areas.

The plant has three quarries and several stone dressing and crushing workshops.

It is producing a wide variety of high-grade building materials, stoneworks and stone fittings with quality natural stones, including granite, marble, gabbro-diabase, serpentine and black stone.

Included in its building materials are plates, kerbstones, balusters, balustrades and the like used in interior decoration of architectural structures.

Stone articles comprise various kinds of wash basins, sinks, TV tables, kitchen tables and chairs.

Stoneworks such as vases, animal sculptures and tableware are also produced.

The plant is now producing dressed stones of various sizes by

Stone Dressing Centre

excavating rough stone with self-propelled rock-drilling machines and cutting them with 30-blade circular diamond saws.

Rough stones such as serpentine are very popular among customers because of their fine quality. They won a prize at the 8th International exhibition of science and technology of stone held in China in October last year.

The plant has put all its production lines, ranging from stone dressing to shipping, on a scientific and IT basis. Besides, it has established an integral system of producing gravel and sand through the processes of crushing cracked stones and purifying stone dust, and of making stone-works of various uses by extracting effective ingredients from them.

Now, the plant has a rush of orders from foreign clients for its enormous production capacity and the superior quality of stone products.

Electronic Keyboard "Jangjasan"

The Keyboard "Jangjasan" is designed to produce a harmonious effect of rhythm, chord and tone of piano, organ and other musical instruments.

It has several functions such as percussion, music memory, composition memory and sound effects.

The M.P. 100 series piano has touch sensitivity of eight stages, so it is superior to that of M.P. 98 series. It is designed to play all sorts of music by selecting three modes of touch. 

Provided with DC 12V adaptor and three pedals, the piano has various playing functions including double timber and reverberation, and four functions for composition memory.

Timbre and rhythm are promptly selected by means of a rotary selector.

Fundamentals of the DPRK Law on External Economic Contracts

The DPRK Law on External Economic Contracts stipulates procedures and methods of concluding and implementing the contracts and their transfer, alteration and cancellation, as well as liability on the violation of contracts and settlement of disputes.

The external economic contracts contain contracting parties, validity of documents to be delivered and concluding method.

A contracting party is a party that exercises rights and discharges obligations in concluding contracts. The contracting party in the DPRK shall be an institution, enterprise or organization approved to conduct external economic transactions.

External economic transactions are subject to approval of the central trade guidance organ.

The contracting parties shall exchange an agreement or documents forwarded by means of communications for the purpose of concluding the contract prior to its signing. These are valid until conclusion of the contract.

An external economic contract shall be concluded on the basis of an agreement or a document exchanged by means of communication.

The contracts to be concluded between the DPRK and abroad and those for investment with a large turnover or of national significance shall be concluded under the approval of the central trade guidance organ or the relevant organ.

If the external economic contracts are to assume legal force, they shall be made in written form. Contracts concluded through telex and fax have the same effect as written form of contracts.

The external economic contracts shall be effective in the following cases:

First, in case that the contracting parties (a representative or an agent included) signed the contract.

Second, in case that the conditions for legal effect of a contract stipulated in the written contract are matured.

Third, in case that the relevant upper body approved the contract.

Fourth, in case that the articles of the contract concluded by the contracting parties are possible to be implemented.

The contracting parties should exactly implement contractual obligations within the set period.

Transfer and alteration of the contract shall be conducted in written form on the basis of agreement between the contracting parties.

Part or whole of the rights and duties of the contract can be transferred. In order for it to come into force it is subject to the consent of the other party.

The contract may be amended, cancelled or supplemented under agreement made between two parties.

The contracting parties can cancel the whole or part of the contract according to the extent of violation or nonfulfilment of the contract on the part of the other party after its conclusion.

But even in case that the contract becomes invalid, its articles related to compensation for loss or damage, clearing of accounts and settlement of disputes shall be still in force.

In case of violation of the contract the loss should be compensated pursuant to compulsory performance liability system and damage liability system.

The damage liability system is regarded as the main practice in the DPRK Law on the External Economic Contracts.

Compensation for damage can be made by cash, goods, property right, adjustment of prices or actual expenses.

In case that the contract deposit, damages and penalty are not paid in due time, the interest or arrears equivalent to those of prolonged days should be paid.

The disputes arising in conclusion and execution of the contracts can be settled by way of consultation, alteration, arbitration or lawsuit. The DPRK Law on the External Economic Contracts demands that the disputes be settled by way of consultation geared to reconciliation between two parties rather than lawsuit or arbitration.

Korea Sangwon

inaugurated 20 years ago, the Korea Sangwon Trading Corporation is engaged in export and import by relying on its large-sized production centres which turn out several categories of goods.

Its head office is in Pyongyang, the DPRK.

The corporation has under its control the Hyesan Timber Processing Factory, the Ryongsong Furniture Factory, the Sunan Furniture Factory, the Anju Paper Mill, the Ragwon Foodstuff Factory and others. It is now boosting the export of goods manufactured at its affiliated factories.

Different sizes of wood-plastic parquets, blockboards, and top-quality furniture are being produced at the modern Hyesan Timber Processing

Trading Corporation

Factory in Ryanggang Province in the northern tip of Korea rich in timber and other large-sized furniture factories

A full range of foodstuffs as well as newly-developed natural toothpaste from the Ragwon Foodstuff Factory are high in demand for they are manufactured under strict hygienic conditions and are superior in quality.

Its affiliated diatomite factory commenced operation recently. Its prospect is promising.

The corporation, in the future, is going to expand the production capacity of its factories, and develop new categories of exports. Besides, it will make every effort to promote exchanges and collaboration with foreign partners.

Koryo Medicines

The Thosong Koryo Medicines Pharmaceutical Factory is a supplier of Koryo medicines whose quality and safety are guaranteed on a high standard suited to the requirements of GMP.

All Koryo medicines free from antiseptic are made from medicinal herbs gathered in deep forests.

They were awarded top prizes on several occasions at international trade fairs.

The factory produces 30-odd kinds of Koryo medicines including Chonghyolhwan, Chongganhwan, Meobathapnamnyulhwan (cornish berry fruit) Liquor, Chongdam Granule, Kyongjiko, Phalinhwan, Uhwangchongamhwan, Yangchunsamok and Kaseogajiji (Cortex Euetherococcus) Tea.

Chonghyolhwan is highly efficacious for angiopeathy such as cerebral thrombosis, cerebral haemorrhage, hypotension, arteriosclerosis, heart attack and cardioneurosis, pains of various origins, headache, giddiness, hypotonia, black spot, illness resulting

from body chill, neuralgia, illness after childbirth and cancer in the early stage.

Its ingredients are Radix Ligustici, Radix Astragal, Radix Rehmanniae, Rhizoma Cyprip and the like.

It is recommended to take one pill daily for 20 to 30 days for lowering the amount of cholesterol accumulated in the body, for 60 to 90 days for the treatment of circulatory disorder, cerebral thrombosis and cerebral haemorrhage, for 3 to 5 months for hepatitis and for 60 days or more for other diseases according to symptoms.

Chongganhwan shows a nervous effect on active and inactive chronic hepatitis and chronic gastritis. It is advisable for adults to administer one pill in a day between meals or in an empty stomach every two days.

For treatment of active hepatitis and active liver cirrhosis with severe serum reaction, it is recommended to take two pills daily (one pill between meals in the morning and in the afternoon) every two days for one to two weeks

and then continue to take one pill daily.

One course of treatment is two to three months. If undesirable reactions are observed, it is recommended to take one pill every four days.

In case of patients suffering from hypotension, its dosage should be avoided.

Uhwangchongamhwan is a famous drug prepared from Kaesong Koryo insam, yam, arthous bezoar, musk, buffalo horn, Radix Liriodes, Radix Ligustici, Poria, Radix Ligustici, Radix Glehniae, Radix Paeoniae, broad bellflower, jujube, etc.

It displays a splendid efficacy in promoting one's energy, and brightening and stabilizing the mind.

It is highly efficacious for prevention and treatment of haemorrhage and paralysis of the mouth, eyes, feet and hands due to its sequelae, heart diseases, neuralgia, high fever and influenza.

In particular, it has a strong efficacy for recovering the function of the damaged

"Thosong"

central nervous system, so it is recommended for epilepsy, children's convulsive fit and anxiety neurosis.

For adults, one to two pills are taken in a dose, two to three times daily, diluted with

For children, 1/8 pill is recommended for those under the age of one, 1/6 pill for two-year olds, 1/4 pill for 3- to 4-year olds, 1/3 pill for 5- to 6-year olds and 1/2 to 3/4 pill for 7-year olds, two to three times daily.

The medicines produced by the factory are winning popularity at home and abroad for their excellent medicinal efficacy.

The factory is making every endeavour to promote trade with foreign countries.

Mt. Kumgang

The world-famous Mt. Kumgang lies in the middle eastern part of Korea.

The mountain has been known as one of the six celebrated mountains and eight beauty spots in Korea from olden times for its magnificent, picturesque and multifarious landscapes.

Covering a vast area, the mountain is divided into Outer Kumgang, Inner Kumgang and Sea Kumgang, and they are further subdivided into scores of districts, valleys and peaks.

Numeros high peaks, rocks of curious shapes, sheer cliffs, deep valleys, ponds and pools, crystal-clear water meandering through the precipices and rocks, wonderful waterfalls and various species of animals and plants—all these remind you of a fairyland.

Mt. Kumgang is more a realm of all natural beauties than a simple scenic spot as it forms scenic beauties of mountains, valleys, hills, lakes, sea and creeks.

In the mountain there are more than one hundred peaks soaring high in the sky such as Paek Kwangsan, Chul, Paekma and Jipson, numerous fantastic rocks such as Samson, Kwanyon and Thakki, over 20 rocks commanding a splendid bird's eye view such as Chosun, Manggun and Paegun, eight natural stone gates such as Kumgang, Sejong and Haeul, caves such as Kumgang, Podok and Palyun, various

passes such as Onjong, Winho and Hyowang, and many valleys such as Onjongchon, Sochang and Chonhong.

Conspicuous are rivers and streams like the Nam River, gorgeous big and small waterfalls, including Kuryong, Pibong, Ogyong and Sibi which are famous as four major waterfalls in Mt. Kumgang, and natural lakes such as Samul, Yonggwang and Kari.

About 1,000 species of blooming plants can be found in the mountain, a grand natural botanical garden, among which more than 100 species of plants are indigenous to it. Its fauna comprises 38 species of animals, 130 species of birds and 10 species of mammals.

The mountain has many historical and cultural relics and remains including Yagom Temple, Phyohun Temple, Buddhist sculptures, and pagodas and monuments, showing the resourceful spirit and artistic talent of the Korean nation.

A tour to Mt. Kumgang can be made by two routes, road and sea. The road route covers 104 km from Wonsan to Onjong-ri. The sea route covers 106 km from Wonsan to Kosong, and then 8 km from Kosong to Onjong-ri and 33.3 km from Onjong-ri to Naegang-ri by road respectively.

Thanks to the people-oriented policy of the Workers' Party of Korea and the government of the DPR Korea, Mt. Kumgang has been developed into

a people's cultural recreation ground
and a world's famous natural attraction.

The Presidium of the DPRK Supreme People's Assembly promulgated and made public the Law on Special International Tourist Zone of Mt. Kumgang in May 2011 with a view to developing Mt. Kumgang into a world special tourist zone. The law provides an opportunity for sightseeing tour of Mt. Kumgang to foreign visitors and the legal status which encourages investment and business activities to foreign investors in the zone.

The Mt. Kumgang special zone, a special tourist zone of the DPRK, enforces a visa-free system and offers an open access to telecommunications such as posts, telephone and Internet to foreign visitors.

The tour of Mt. Kumgang can be made in various forms and methods, including mountaineering, sightseeing, sea bathing, recreation, amusement, sports and medical treatment. Besides, colourful functions such as international conference, exhibitions, exposition, seminar, art performance and sports

game can be arranged.

Corporate bodies, individuals and economic organizations from foreign countries and Korean compatriots from the south and overseas are encouraged to invest individually or jointly in infrastructure construction to develop Mt. Kumgang and in such forms of businesses as travel agency, hotel, restaurant, casino, golf course and contracted facilities.

The interest in international tour of Mt. Kumgang and investment in it is increasing enormously.

The world-renowned Mt. Kumgang will offer you the best in hospitality.

Koryo Insam Products

Koryo insam is a subspecies of Kinsong situated in the mid-western region of Korea. At present, there are many species of insam in the world, but none of them can match Kinsong Koryo insam. It is because the Kinsong Koryo insam has a remarkable medicinal efficacy thanks to peculiar soil and climate conditions and quality water in this region and unique method for its cultivation and processing.

Its root, koryo, stem, bulb and fruit contain a large amount of glucoside, saccharides, essential oil, amino acids, peptide, organic acids, mineral substances, microelements, enzymes, vitamins and flavonoid.

As a tonic, Koryo insam exerts a favourable effect on metabolism by improving immunocompetence and central nervous system, facilitating digestion and absorption of foods, accelerating biosynthesis of protein and fatty acid and the secretion of bile, and lowering blood-sugar levels.

The products are prepared from six-year-old Kinsong Koryo insam.

Indications: Depression of physical and mental strength, poor appetite, indigestion, physical fatigue, asthenia before and after childbirth, sleeping disturbance and amnesia.

Dosage: Slice it and then decoct 12-20g of it with 3 fruits of jujube in 250ml of water for about 2 hours.

Shelf life: Ten years.

Packing: In iron cans of 500g, 300g, 150g, 75g and 30.5g.

Challenger to All Diseases

Of late, the eyes of the world medical circles are being focused on Koryo medicines that ensure the safety of human life more than synthetic medicines. Accordingly, all sorts of obstinate diseases are cured by means of natural medicines or healthy foods.

Unicolon is a highly effective immunoinvigorator which not only enhances hematogenous and immune functions but also intensifies anti-oxidation and regulates autonomic nerve.

As natural nutraceuticals, Unicolon is prepared from C.G.F. extracted from chlorella, world-famous Koryo Island, Cortex Phellodendri, Radix Liquiritiae, Poria, Herba Artemisiae Messor-Schmidtianae and wild honey.

It helps treat various kinds of diseases by accelerating the action of super anti-oxidation and immunoinvigorator. In particular, it takes a good effect on cardiac and cerebrovascular system, metabolic disorder, hepatitis, tuberculosis, women's diseases, autonomic imbalance and other obstinate diseases.

Its clinical examinations proved that the curative rate of cerebral thrombosis (cerebral arteriosclerosis and vertebral arteriosclerosis) was 98.2%, non-dependence diabetes 87%, hepatocirrhosis in early stages and hepatitis 80%, cerebral concussion 96.6%, autonomic imbalance 85.6% and menopausal and other women's diseases 96.2%.

Unicolon was applied for a patent to an international patent office in November 2008 according to PCT, and received a favourable estimation from it.

The Chongchun Pharmaceutical Factory is preparing more than 10 kinds of medicines with Unicolon as their main ingredient. These medicines are enjoying popularity among clients as nutraceuticals effective in strengthening immune system.

A member of a foreign embassy to the DPRK said, "I suffered from anxiety about my disease before having come to Korea. However, I recovered soon after its administration. Unicolon is, indeed, a genuine nutraceuticals worthy of praise in the world."

Cure-all in the 21st century, Unicolon! It will ensure a good health for you.
